## Objective

Motivated computer science student aiming to add value to the organization by contributing to software development tasks, writing clean and maintainable code, and supporting team objectives. Committed to continuous learning, improving technical skills, and delivering reliable solutions that align with the company's goals.

## Education

**2023-2027:** B.Sc. in Computer Science, Matrouh University for Technology and Information

## Courses

### 28/10/2025 – 20/7/2026 | Full Stack Developer ASP.Net MVC - DEPI

- Studied full stack web development concepts including frontend and backend technologies.
- Built dynamic and responsive web applications using modern development tools.
- Worked with databases and server-side logic to develop complete end-to-end solutions.
- Gained hands-on experience through practical projects and real-world scenarios.

### 1/6/2025 – 20/7/2025 | Frontend Development – ITI

- Learned the fundamentals of frontend web development and user interface design.
- Focused on creating clean, user-friendly, and accessible interfaces.
- Applied modern frontend practices to enhance user experience and performance.
- Worked on practical tasks and projects to strengthen frontend development skills.

## Skills

- **Backend:** C#, ASP.NET MVC, Entity Framework, LINQ, RESTful APIs
- **Frontend:** HTML, CSS, JavaScript, Bootstrap
- **Frameworks:** React, Angular
- **Database:** SQL Server
- **Concepts:** OOP, SOLID Principles, Design Patterns

- **Tools:** Git, GitHub, Visual Studio

## Projects

### 15/11/2025 | QR Attendance System

- QR Smart Attendance System is an intelligent attendance solution that replaces traditional manual and paper based methods with fast and secure QR code technology. It is designed for universities, schools, training centers, and companies to easily track and manage attendance. The system is built using ASP.NET and SQL Server, allowing users to scan a unique QR code to record attendance automatically with date and time, while preventing cheating or duplicate entries. It also provides organized attendance records and reports, improving accuracy, saving time, and increasing overall efficiency.
- Technologies: ASP.NET MVC, C#, Entity Framework, SQL Server, HTML, CSS, JavaScript
- https://github.com/Youssef11-Develaper/SAMSQR

### 20/1/2026 | Restaurant Management System

- Developed a web-based restaurant management system that enables customers to browse menu items and reserve tables easily. The application manages restaurant data such as menu items, reservations, and customer information through a structured database and well-organized backend logic. The system was designed to ensure efficient data handling and provide a clean, user-friendly interface that simplifies the table booking process.
- Technologies: ASP.NET MVC, C#, Entity Framework, SQL Server, HTML, CSS, JavaScript
